

I would like you to answer the following questions in a short answer format using Markdown.

**Turn all of the questions below into headers.**

**If the questions are related, make the headers reflect this by subordinating them.**

1. For questions that ask for a list, use the appropriate Markdown syntax to create either ordered or unordered lists.
  2. Use **bold** and *italic* text for emphasis in your responses.

GitHub Username: healeyj Team name: Team #1 Today's date: 07/01/16

**What tools have you we worked with so far in this class?**

- codeanywhere remote linux system (ubuntu)
- bash
- git
- less/vim
- html
- markdown
- css
- jekyll
- ruby
- pandoc

**Which have you found most potentially useful?**

- pandoc

**Why?**

goodbye manual formatting

### What tools have been the most difficult to learn?

- css
- ruby

### Why have they been particularly difficult to learn and use?

CSS is *extremely* nuanced to the point of daunting. Hunting around to change the website aesthetics is fun, but only for a few minutes before it becomes frustrating.the

Ruby gave me hell when I first tried to install it, and I still don't understand what it even does.

### What tools would you like to learn more about?

- bash
- pandoc
- ruby

---

### *When you are finished with the questions in file:*

1. I want you to change the name of the file to your GitHub username.
2. You will then work as a group to convert the file to HTML, DOCX, and ODT formats, per the instructions in class.
3. Then I want you to add, commit, and push your changes.
4. Finally, you will create a pull request in GitHub to get these files back into my original repository.
