

I would like you to answer the following questions in a short answer format using Markdown.

**Turn all of the questions below into headers.**

**If the questions are related, make the headers reflect this by subordinating them.**

1. For questions that ask for a list, use the appropriate Markdown syntax to create either ordered or unordered lists.
  2. Use **bold** and *italic* text for emphasis in your responses.
- 

1. GitHub Username: lumizila
2. Team name: Orange
3. Today's date: July 6th

**What tools have you we worked with so far in this class?**

1. GitHub
2. Codeanywhere
3. pandoc
4. jekyll
5. html/css
6. markdown

**Which have you found most potentially useful?**

Github

**Why?**

Github is mostly useful to me since everyone in computer science uses it.

## What tools have been the most difficult to learn?

Jekyll and markdown

## Why have they been particularly difficult to learn and use?

Because there are a lot of things going on when I use those that I have no control of and that are hidden from me. It's hard to understand how markdown relates to web programming.

## What tools would you like to learn more about?

LaTeX is something I'd be interested in learning better.

---

*When you are finished with the questions in file:*

1. I want you to change the name of the file to your GitHub username.
2. You will then work as a group to convert the file to HTML, DOCX, and ODT formats, per the instructions in class.
3. Then I want you to add, commit, and push your changes.
4. Finally, you will create a pull request in GitHub to get these files back into my original repository.
