

I would like you to answer the following questions in a short answer format using Markdown.

Turn all of the questions below into headers.

If the questions are related, make the headers reflect this by subordinating them.

1. For questions that ask for a list, use the appropriate Markdown syntax to create either ordered or unordered lists.
 2. Use **bold** and *italic* text for emphasis in your responses.
-

1. GitHub Username: jbarreto11
2. Team name: Orange
3. Today's date: 7/6/2016

What tools have you we worked with so far in this class?

1. Markdown
2. HTML 5
3. Pandoc
4. Git
5. CSS
6. Codeanywhere
7. Jekyll Template

Which have you found most potentially useful?

1. Github
2. Codeanywhere
3. Jekyll Template

Why?

These tools are **very useful** because when combined, one can build an *informative website*.

What tools have been the most difficult to learn?

HTML, CSS, and Markdown have been the most difficult to use when in the context of a **Jekyll Template**.

Why have they been particularly difficult to learn and use?

One must identify which language is being used in each part of the template so that one is able to *accurately* edit the template.

What tools would you like to learn more about?

I would like to learn more about how to edit different Jekyll templates and if there are other website templates that are not Jekyll. * * *

When you are finished with the questions in file:

1. I want you to change the name of the file to your GitHub username.
2. You will then work as a group to convert the file to HTML, DOCX, and ODT formats, per the instructions in class.
3. Then I want you to add, commit, and push your changes.
4. Finally, you will create a pull request in GitHub to get these files back into my original repository.
