

I would like you to answer the following questions in a short answer format using Markdown.

Turn all of the questions below into headers.

If the questions are related, make the headers reflect this by subordinating them.

1. For questions that ask for a list, use the appropriate Markdown syntax to create either ordered or unordered lists.
2. Use **bold** and *italic* text for emphasis in your responses.

-
- GitHub Username: johnrmullan
 - Team name: Team Alpha
 - Today's date: July 6, 2016

What tools have you we worked with so far in this class?

- Git
- Markdown
- HTML5
- Jekyll
- And More!

Which have you found most potentially useful?

I think using Git will be the most useful.

Why?

Git allows for team collaboration to be much more efficient. It helps keep overlapping and repetition from happening, which is a huge burden on productivity.

What tools have been the most difficult to learn?

I think learning about building our website has been the most difficult.

Why have they been particularly difficult to learn and use?

It has been difficult because I don't really fully understand how I can create new navigation, upload local files instead of links, create additional blog areas, link to other parts of my site, etc.

What tools would you like to learn more about?

I really want to learn more about HTML5 and Markdown and how that relates to building my website. I really want to build my website and use it as an asset for future career prospects.

When you are finished with the questions in file:

1. I want you to change the name of the file to your GitHub username.
2. You will then work as a group to convert the file to HTML, DOCX, and ODT formats, per the instructions in class.
3. Then I want you to add, commit, and push your changes.
4. Finally, you will create a pull request in GitHub to get these files back into my original repository.
