I would like you to answer the following questions in a short answer format using Markdown.

### Turn all of the questions below into headers.

If the questions are related, make the headers reflect this by subordinating them.

- 1. For questions that ask for a list, use the appropriate Markdown syntax to create either ordered or unordered lists.
- 2. Use **bold** and *italic* text for emphasis in your responses.

# What tools have you we worked with so far in this class?

- Github
- Codeanywhere

## Which have you found most potentially useful?

I have found that github when completing my work on the codeanywhere comandline.

#### Why?

Github has been helpful because of the abundent tutorials that they provide for when I run into an issue.

### What tools have been the most difficult to learn?

 $Code any where \ {\it has} \ {\it taken} \ {\it some} \ {\it time} \ {\it to} \ {\it transition} \ {\it into}.$ 

# Why have they been particularly difficult to learn and use?

Getting used to working without an interface, strictly typing into a command line, is difficult at first. It takes practice in order to feel comfortable with the workflow.

## What tools would you like to learn more about?

<ul> <li>codear</li> </ul>	nywhere			

#### When you are finished with the questions in file:

- 1. I want you to change the name of the file to your GitHub username.
- 2. You will then work as a group to convert the file to HTML, DOCX, and ODT formats, per the instructions in class.
- 3. Then I want you to add, commit, and push your changes.
- 4. Finally, you will create a pull request in GitHub to get these files back into my original repository.
