GitHub Username: cnpence **Team name**: Eureka! **Today's date**: 7/6/16

What tools have you we worked with so far in this class?

- GitHub
- CodeAnywhere
- Languages (HTML, Markdown, etc.)
- CSS
- Jekyll

Which have you found most potentially useful?

Jekyll and CodeAnywhere (as a team)

Why?

You can use the two together to make a legit website, and that is a **super** profitable skill!

What tools have been the most difficult to learn?

CSS and CodeAnywhere (as a team)

Why have they been particularly difficult to learn and use?

They require a lot of trial and error in order to get the site to look *just* right, and I'm so impatient that it takes all my willpower not to make 5384738 different edits and *then* commit and push them.

What tools would you like to learn more about?

- Java
- BASH
- HTML

A lot of job applications I've been running through require one or more of these skills in order to apply! * * *
