I would like you to answer the following questions in a short answer format using Markdown.

Turn all of the questions below into headers.

If the questions are related, make the headers reflect this by subordinating them.

1. For questions that ask for a list, use the appropriate Markdown syntax to create either ordered or unordered lists.

2. Use **bold** and *italic* text for emphasis in your responses.

- GitHub Username: jonpage3
- Team name: Team #1
- Today's date: 7/6/16

What tools have you we worked with so far in this class?

- the linux command line in codeanywhere
- github and git
- markdown, html and css
- pandoc
- jekyll

Which have you found most potentially useful?

- Markdown
- pandoc

Why?

Converting files to different formats by using pandoc will save me *lots* of **time and work.**

What tools have been the most difficult to learn?

- Html
- css

Why have they been particularly difficult to learn and use?

Because of the short semester it is difficult to remember all the rules with html and its relation to css.

Figure 1: jimmystewart

Markdown helps!

What tools would you like to learn more about?

Using databases and spreadsheets.

When you are finished with the questions in file:

1. I want you to change the name of the file to your GitHub username.
2. You will then work as a group to convert the file to HTML, DOCX, and ODT formats, per the instructions in class.
3. Then I want you to add, commit, and push your changes.
4. Finally, you will create a pull request in GitHub to get these files back into my original repository.
