I would like you to answer the following questions in a short answer format using Markdown.

Turn all of the questions below into headers.

If the questions are related, make the headers reflect this by subordinating them.

1. For questions that ask for a list, use the appropriate Markdown syntax to create either ordered or unordered lists.

2. Use **bold** and *italic* text for emphasis in your responses.

- GitHub Username: mikerw
- Team name: Eureka
- Today's date: 7/6/16

What tools have you we worked with so far in this class?

1. GitHub
2. Codeanywhere
3. Different fun languages
4. Jekyll

Which have you found most potentially useful?

GitHub

Why?

Because you can do so many things with it! Like share work and create blog posts

What tools have been the most difficult to learn?

1. GitHub
2. Codeanywhere

Why have they been particularly difficult to learn and use?

To me, it was difficult learning how to push and pull between the two, wanting something in one to show up in the other, and also learning how to move work done in the testing branch to GitHub.

What tools would you like to learn more about?

1. GitHub

    1. *In the context of making websites.*
    2. *How to upload videos to blog posts.*
    3. *Different tabs like Wiki and Pulse.*

2. Codeanywhere

    1. *In relation to GitHub.*
    2. *Languages.*
    3. *More file manipulation.*

When you are finished with the questions in file:

1. I want you to change the name of the file to your GitHub username.
2. You will then work as a group to convert the file to HTML, DOCX, and ODT formats, per the instructions in class.
3. Then I want you to add, commit, and push your changes.
4. Finally, you will create a pull request in GitHub to get these files back into my original repository.
